Harvey 2 ward—Male urology

Come and work on Harvey 2 , city campus. We are a very friendly bunch of people, who provide excellent care to a wide range of different patients who have either undergone surgery or been admitted due to a urology emergency.

There are many opportunities whilst working on Harvey 2. We offer a great preceptorship programme allowing you to work within other areas of urology to expand your knowledge whilst still in the super-nummery period.

You will be fully supported by your preceptor and the experienced staff on the ward. You will receive a local induction and partake in the acute care skills course.

Receive practical support to develop knowledge and skills in a variety of different clinical skills, including; intravenous medications, catheter care and insertion, epidural and patient controlled analgesia, nephrostomy care and venopuncture and cannulation. But don't worry you will not be expected to learn all of these instantly, we will work closely with you to develop skills at your individual pace.

We've had great feedback from student nurses; 'The staff are supportive and welcoming, very approachable and able to ask anything', 'so much to learn, its not always the same'.

We fully support and encourage continuing professional development and revalidation, there will be opportunities to complete the mentor's course, university modules and study days.

There are a variety of nurse link roles to get involved in, including; tissue viability, nutrition and hydration, infection control and safeguarding.

Da Vinci robot used in urological surgery.
